

NEWSLETTER – 2009 H2

Welcome to this second 2009 edition of our Newsletter, a regular publication with all the latest news from **Damor Engineering Ltd**. As is traditional with the final newsletter of the year, we would like to wish all our clients and suppliers a very Merry Christmas and a prosperous 2010.

RECENT ACHIEVEMENTS

In August, **Damor Engineering Ltd** completed its role in assisting a major international engineering contractor with an independent technical review of project construction progress for a new aluminium smelter in the middle-east.

In September, we were awarded two valuable contracts, to carry out the finite element modelling and analyses, for the design verification of three bespoke high-pressure pipe flanges in sizes 18", 22" and 24", plus four pipeline rapid-opening closures in sizes 20", 22", 26" and 28" to suit the same items of major equipment. The flanges were assessed in accordance with the requirements of the ISO 13623 piping code, and the closures to ASME VIII Division 1.

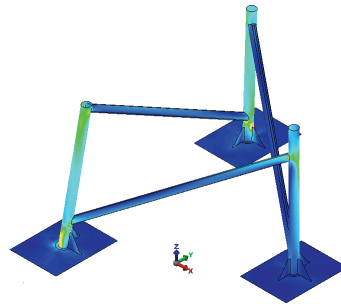

In October, **Damor Engineering Ltd** was also commissioned to re-visit a job we had completed earlier in the year, to assess the lower legs and base attachment of a vent tower structure on an FPSO, under different load and fatigue design criteria from those of the original brief.

In November 2009, under two separate assignments for the same client, we made due-diligence visits to the site of a new aluminium smelter construction project in northern Europe, and also to the offices of a major provider of aluminium reduction technology.

FUTURE OPPORTUNITIES

Damor Engineering Ltd has been in recent discussions regarding further due-diligence works associated with several aluminium smelter projects.
